

St Joseph's RC Primary School

In Year 3 we have been learning about shadows. We closed the blinds and turned the classroom lights off so it was quite dark then experimented with torches to see if we could create different shadows. We shone our torches onto various objects and observed the shadow that was created. We learned that shadows are formed when the light from a light source is blocked by an opaque object. Opaque means when you can't see through something. Our toys and teddies created shadows but we were also able to create shadow puppets with our hands against the wall.
